

Canadian Auto Sales Forecast Increased to 2 Million Units in 2017

- Global car sales declined below a year earlier in April, but signs point to a rebound in May.
- We have raised our 2017 Canadian sales forecast to 2 mn units, up from 1.94 mn owing to a stronger-than-expected recovery on the Prairies.
- Improved oil patch outlook powers new vehicle purchases by Canadian businesses to decade high.

RECENT GLOBAL NEW VEHICLE SALES DEVELOPMENTS

Global car sales fell 2.5% below a year earlier in April, the first monthly year-over-year decline in nearly two years. Nevertheless, year-to-date volumes remain 3% above last year's record-setting pace. The April fall-off was broad-based and largely reflects temporary distortions, such as a late Easter which undercut sales in both North America and Western Europe. Despite the decline in new car sales, most economic indicators continued to strengthen in April, pointing to ongoing improvement in global economic activity and rising new vehicle demand. For example, merchandise exports from Asia to the world posted a double-digit year-over-year increase for the third consecutive month, the best performance since late 2011. Leading economic indicators for the United States and Western Europe also continue to accelerate, and business investment—the weak link in global economic activity in recent years—is gaining momentum across both developed and emerging markets (see chart 1). As a result, US capital goods exports climbed above a year earlier in April, rebounding from a 4% slide during all of 2016.

More recent sales data for May point to a reversal of the April slowdown across many countries. For example, purchases surged to record highs in both Canada and Mexico last month. Meanwhile, sales to households improved in the United States and accelerated sharply in the largest markets of Western Europe.

Car and light truck sales surged 11% y/y in Canada last month—the largest gain since late 2014. This robust performance lifted the monthly sales pace back above an annualized 2.0 mn units and prompted us to increase our full-year 2017 forecast. The forecast upgrade reflects a broad-based strengthening in economic activity across Canada this year, especially in Alberta. Our full-year 2017 real GDP forecast for Canada has been upgraded to 2.6%, more than a percentage point higher than the 1.5% growth reported last year.

New vehicle purchases by **US** households bounced back in May, lifting industry transactions prices 2% above a year earlier. However, weak fleet activity kept the overall US sales pace below an annualized 17 mn units for the third consecutive month. In contrast, vehicle sales in **Mexico** have fully recovered from the April decline, setting a record for the month of May. The improvement lifted year-to-date sales 5%, and reflects solid job creation—currently advancing in excess of 4% y/y, the best performance among OECD countries—and strengthening consumer confidence.

FOCUS ON CANADA: PRAIRIES DRIVE CANADIAN SALES TO RECORD HIGH

Canadian auto sales have exceeded expectations this year, as strengthening economic growth has led to a sharp rebound in purchases in the resource-rich Prairie Provinces, including a recovery in fleet volumes.

Chart 1

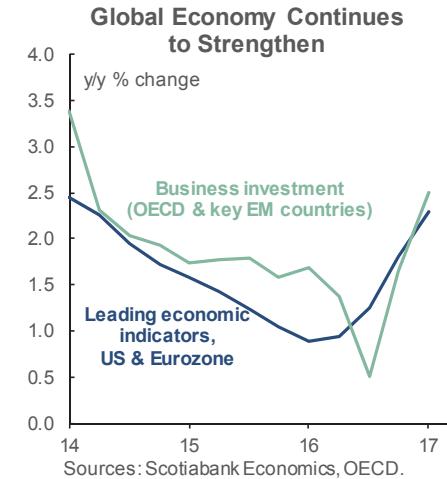

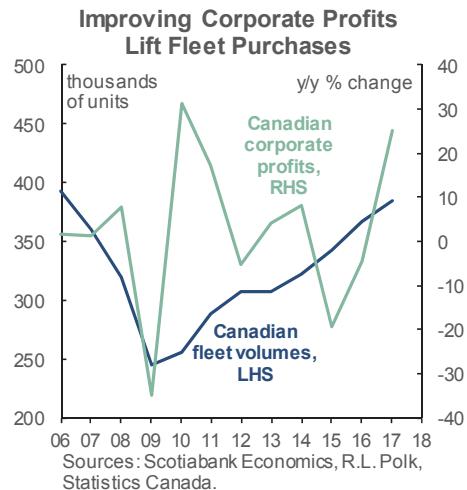

Chart 2

The car and light truck sales acceleration on the Prairies this year includes an 18% y/y surge in May—the largest increase in more than four years. This represents a significant reversal from a 15% slump during the past two years, and is a much stronger rebound than we were originally expecting. In fact, **the Prairies are the only region to post double-digit sales gains so far this year, enabling the region to account for 37% of the overall increase in Canadian new vehicle sales through May, more than double its historical share of the Canadian new vehicle market.**

An improving oil patch outlook has more than doubled the number of active drilling rigs in Alberta this year, enabling Calgary to move to the forefront of growth among Canadian cities. Job gains in Calgary accelerated to 3.5% y/y in May, the fastest job creation in two years and double the growth rate across all of Canada. This represents an impressive reversal for a city that was still shedding jobs last October. In fact, Calgary has accounted for more than 70% of all job growth in Alberta this year, double its share of both the provincial and national labour markets.

The rebound in the Calgary economy has lifted auto sales in the city 12% y/y through April and accounted for 40% of all car and light truck sales in Alberta this year, up from a low of only 32% during the final months of 2015. The city's economic prospects are also being supported by a 37% y/y surge in housing starts through May, as well as a double-digit gain in resale housing activity. In fact, Calgary and Ottawa are the only major centres among Canada's largest cities to report double-digit sales gains across the MLS system during 2017.

A double-digit increase in capital spending by the oil patch in 2017 has also led to additional business purchases of new cars and light trucks. Fleet volumes at Calgary dealerships have surged 20% y/y through April, and accounted for nearly 70% of all new fleet activity across Alberta. **In fact, the surge in Calgary's fleet volumes represents half of the nationwide increase through the first four months of the year.** Business purchases of car and light trucks are also rebounding in the rest of the province, helping Alberta to account for nearly 75% of the increase in business volumes across Canada. This represents nearly five times the province's share of overall Canadian fleet purchases in 2016.

While Alberta is the key driver behind improved fleet volumes in Canada in 2017, sales to businesses have also picked up in several other provinces alongside a strengthening corporate profit outlook. In fact, corporate earnings surged nearly 30% y/y across Canada in the opening months of 2017, the best performance since the first half of 2010 when the global economy was in its first year of recovery. Historically, rising profitability has always been associated with rising fleet purchases (see chart 2). We expect the improving corporate profit outlook to lift Canadian fleet volumes to a decade-high of 385,000 units this year, thereby supporting our raised new vehicle sales projection for 2017.
