Market Tone

USD strength is persisting for longer than we anticipated, prompting some further revisions to our near-term forecasts for the US dollar (USD) last month. Inflationary pressures in the US—and around the world—remain intense (notwithstanding the softer than expected July CPI report). This is entailing sustained upward pressure on US yields despite US GDP data suggesting the economy is experiencing a “recession lite”. The fallout from the ongoing Ukraine conflict and other challenges are curbing scope for higher rates in Europe, despite surging prices, while Japanese policy makers see no urgency to alter domestic policy settings, ensuring the yen (JPY), which is the weakest performing major currency this year, remains soft.

Market Tone

Our latest USD forecasts imply the USD will remain relatively firm over the balance of the year. The USD withstood a second, successive negative GDP print in Q2, which is typically shorthand for a recession. Policy makers pushed back against the notion of a recession in view of strong labour markets and the July non-farm payroll report showing a 528k gain in jobs tends to support that perspective. Clearly, however, the risk of slowing growth is rising, given tighter policy settings but we expect the Fed to push ahead with rate hikes as it targets a soft landing. Our forecast anticipates the Fed funds target rate reaching—and peaking at—3.25% by year-end but market pricing currently suggests investors expect policy hikes to extend to 3.50–75% into H1 next year. We think the USD bull cycle is looking very extended but USD bears will have to remain patient; absent a major, negative catalyst, firm US yields, broader market uncertainties and the lack of attractive alternatives will keep the USD supported.

The Canadian dollar (CAD) remains the best-performing G10 currency—outside of the USD—so far this year. A resilient economy and a hawkish central bank plus firm commodity prices conferring a positive terms of trade boost to the currency constitute strong supports for the CAD, even if it has struggled to reflect those factors against the USD. The CAD retains a strong profile against other major currencies and seems poised to remain firm as domestic yields push higher. Our forecasts anticipate domestic growth and interest rates outpacing the US this year and next, which should limit the USD's ability to advance beyond the recent range peaks against the CAD and, we believe, push the CAD modestly higher into year-end, especially if the broader risk backdrop improves which will allow the CAD to reflect its positive underlying fundamentals more fully. We expect the Bank of Canada (BoC) to raise the Overnight rate to 3.50% by the end of this year and hold that level through 2023.

In Europe, the consequences of the Ukraine war remain a clear constraint on prospects. European energy security remains a key consideration for the outlook over the next few months. It is not in Russia's best interests to cut off Europe altogether from its natural gas supplies and Europe is doing a decent job of building gas reserves ahead of winter. But supply uncertainty is real and surging energy costs are lifting inflation and curbing discretionary spending and industrial output. Recession risks are rising in the Eurozone and hot summer weather is adding to economic headwinds; low water levels are compromising key logistical routes on the Rhine (which transports around 30% of German energy raw materials). The European Central Bank raised interest rates 50 bps in July but markets expect only modest rate increases over the balance of the year and yield differentials will curb the appeal of the euro (EUR) for now. Negative growth surprises or energy supply disruption would risk pushing the EUR below parity versus the USD, we believe. The unsettled Italian political backdrop, prompting Moody's to downgrade Italy's sovereign outlook, figures as another, nascent risk for the EUR.

In the UK, the cost-of-living crisis—which is being exacerbated by the prospect of another huge jump in household energy prices into the winter—and sluggish growth may impede the Bank of England's ability to confront soaring inflation and satisfy market expectations for tighter policy. This will weigh on the pound (GBP) broadly. Clear challenges for the UK and, especially, the Eurozone suggest the Swiss franc (CHF) is poised to stay relatively firm, particularly as the Swiss National Bank may tolerate a stronger exchange rate to combat sticky domestic inflation.

The rise US yields and a clear lack of urgency to adjust Bank of Japan (BoJ) policy settings has maintained pressure on the yen (JPY). Recent upper house elections in Japan reinforced the political status quo and suggest no pressure on the BoJ to alter its policy trajectory. Wide US-Japan yield differentials will keep the JPY soft for the foreseeable future while high commodity prices represent another, negative impulse on the currency (via a negative terms of trade shock). We do think that USDJPY gains towards the 140 area in H2 may represent a high-water mark, however, with the JPY looking significantly oversold. A weak JPY has kept regional Asian FX trends subdued in recent months but some slowing export momentum, China's strict COVID-19 policies and regional geo-political tensions have also factored into regional FX softness.

Some Pacific Alliance currencies have shown resilience against broader USD strength and elevated international uncertainty. The Mexican peso (MXN) has experienced bouts of heightened volatility this year but USDMXN has pivoted in a broad range around its 200-day moving average and is currently holding a small gain versus the USD and CAD in year-to-date terms. Sharp rises in domestic interest rates have supported the MXN and we expect policy makers to tighten rates further, holding USDMXN within recent ranges. The Peruvian sol (PEN) is also maintaining a small rise against the USD in year-to-date terms amid rising domestic interest rates but political noise around President Castillo remains intense, lifting uncertainty. Pressure on the Chilean peso (CLP) has abated, thanks to a successful—but costly—deployment of central bank reserves. However, uncertainty over the constitutional reforms persists and surging inflation will entail tighter monetary policy, slowing growth. Scope for CLP gains remains relatively limited ahead. The Colombian peso (COP) outlook is also clouded by domestic politics, international uncertainty and the stronger USD but the July extremes do appear to be an overshoot and we anticipate some modest gains for the COP through year-end.

North America

USD

Poised to Remain Firm Amid Few Alternatives

Current spot 1,267.00

USD—Despite the US economy falling into a “technical recession”, investors continue to feel that there is no viable alternative to the USD as the Fed pushes ahead with tighter monetary policy. We expect the USD to remain firm in the next few months but significant or sustained gains may be hampered by stretched valuation (the DXY is trading one standard deviation above its 10Y moving average) and stretched USD-bullish positioning among investors. A lot of good news is already priced into the USD and the currency is starting to look overvalued, in our opinion.

Source: Bloomberg.

Shaun Osborne, Canada 416.945.4538

USDCAD

Outlook Revised but Positives Remain

Current spot 1.2890

USDCAD—We have relented on our bullish prognosis for the CAD in H2 2022 and now look for USDCAD to hold near current levels over the balance of the year (ending 2022 at 1.27). We continue to believe that our underlying fundamental story—we are forecasting relatively higher growth and tighter monetary policy in Canada over the US this year and next as well as relatively firm commodity prices—merits a stronger CAD forecast, however. We target USDCAD declining to 1.23 into the end of 2023.

Shaun Osborne, Canada 416.945.4538

USDMXN

Peso Supported by Tighter Monetary Policy

Current spot 19.8325

USDMXN—MXN had a reasonable month, ranking as the 7th top performer among the major 32 global FX (+2.1% in spot). Banxico’s proactive rate hikes are arguably the major factor behind the peso’s strength, and we anticipate that for near term, we will continue to see its rate hikes matching the pace set by the Federal Reserve, keeping the interest rate spread between the 2 countries near 600 bps. There are some risks looming on the horizon, such as the USMCA arbitrage against Mexico by Canada and the US due to energy policy, inflation risks to what are so far resilient remittance flows, as well as continued weak foreign investment, but we don’t see these being a major headwind for MXN during this calendar year.

Major Currencies

EURUSD

Downside Risks Remain Amid Uncertainties

Current spot 1.0178

Source: Bloomberg.

EURUSD—The EUR failed to benefit from the ECB’s surprise 50 bps hike in July, given weak guidance about future rate moves and still widely negative interest rate spreads over the USD. Economic prospects remain questionable, given the risk of high energy prices disrupting discretionary spending or, worse, curtailed natural gas supplies from Russia. In the event of severe energy supply disruption, EUR losses are likely to extend below parity. About the only thing in the EUR’s favour is that markets are already aggressively short the currency.

GBPUSD

Negative Outlook on Surging Inflation

Current spot 1.2076

Source: Bloomberg.

GBPUSD—Sterling’s outlook is negative and sentiment and positioning remain appropriately bearish. The BoE is likely to tighten policy again in September (50 bps) to curb surging inflation but weak growth prospects and the growing cost-of-living crisis as UK households face further, significant increases in energy costs in the coming months, suggest that there is only so much the economy can bear. Market pricing may be over-estimating how much more tightening beyond September can be implemented (+125 bps of additional hikes priced in through H1 2023 which is about 50 bps too much, in our opinion). We expect Cable to trade below 1.20 into year-end.

Scotia Forecasts

Shaun Osborne, Canada 416.945.4538

USDCHF

Persistent Strength on Sticky Inflation

Current spot 0.9452

Source: Bloomberg.

USDCHF—The SNB’s June decision to raise interest rates (+50 bps, taking the key policy rate to -0.25%) and allow the CHF to appreciate reflects the central bank’s concern that inflationary pressures, while low by international standards, are proving harder than expected to control. An “active” approach to CHF management now allows the SNB to support the CHF if it weakens too far as well as curb strength. The SNB policy rate is likely to rise a little more in the coming weeks and we look for the CHF to strengthen modestly against the EUR to 0.96 into Q4 as policy makers leverage the exchange rate to curb domestic prices.

USDJPY

Negative Yield Spreads Curb Upside

Current spot 133.24

Source: Bloomberg.

USDJPY—Despite the JPY’s rebound against the USD since mid-July, we see little reason for optimism on the near-term outlook. With BoJ policy set to remain highly accommodative, rising interest rates elsewhere—especially in North America—will keep the JPY on the defensive. High commodity prices continue to deliver a negative terms of trade shock on the economy and have undermined Japan’s traditionally strong external accounts position at least temporarily, adding to JPY-negative forces. We expect USDJPY to remain around the 140 level through year-end.

Scotia Forecasts

AUDUSD

Rally Fades as Metals Prices Fall

Current spot 0.7039

Source: Bloomberg.

AUDUSD—The AUD has given back around half of the rebound made in the wake of the March 2020 pandemic low. Losses reflect a sharp (30% plus) fall in iron ore prices in the past few months as China’s economy has struggled to gain momentum. RBA tightening expectations have also been repriced following the launch of its tightening cycle in May but may need to adjust further. We see the RBA key rate reaching 2.50% by year-end (from 1.85% currently) whereas swaps are pricing in the policy rate near 3.25%. As a result, we see some downside risk in the AUD outlook over the balance of the year and forecast 0.65 for Q4.

Latin America

USDBRL

Gains Underpinned by Aggressive Hikes

Current spot 5.0802

Source: Bloomberg.

USDBRL—The BRL has lost some shine after kicking the year off as the top performing major global currency, with concerns over fiscal risks in a higher interest rate environment, commodity prices losing steam, and political uncertainty hurting its performance in the early summer. However, the month of July was again good for the real, seeing it gain +5.1% versus the US dollar. The BCB's aggressive rate hikes (SELIC sits at 13.75%) have likely been the real's top support, but we've also seen Presidential campaign front runner Lula make some decisions that eased politics related pressures (including choosing a moderate running mate—Alckmin). The electoral race is in its last leg, with the first round set for October 2, and the runoff for October 30.

USDCOP

Steadies After Record High

Current spot 4,162.00

Source: Bloomberg.

USDCOP—In July, USDCOP reached an all time high of 4,680 pesos, as US recession fears stoked risk aversion while central banks maintained their hawkish policy approach. The international stress coincided with the local presidential elections results, which led to a month of moderate liquidity and sudden intraday movements. Our macro model points out that even under a negative scenario, USDCOP should not consistently trade above 4,300 pesos. In August, pressures eased, but the USDCOP is expected to continue operating under a highly volatile context, awaiting central banks' actions in September. We expect the COP to oscillate between 4,000 and 4,300 at worst but we are maintaining our call of USDCOP closing around 3,950 by the end of this year.

USDPEN

Upside Limited Amid Strong USD, Uncertainty

Current spot 3.8458

Source: Bloomberg.

USDPEN—The PEN posted an appreciation of 3.1% YTD driven by a greater supply of dollars from offshore investors, attracted by the high yields of Peru’s sovereign bonds, and from pension funds, who need liquidity in soles to meet the sixth withdrawal of private pension funds. These flows are partially offset by higher corporate demand—which reacts to greater local political noise—and by maturities of BCRP derivative instruments, which have been partially renewed. Our forecast is close to 3.95 at year-end, in view of a strong dollar globally and higher domestic inflation. Uncertainty remains high, however. The degrees of uncertainty remain high. External fundamentals have weakened due to the deterioration in the terms of trade, but a trade surplus remains, at least double the pre-pandemic level.

USDCNY

Downside Limited due to Inflationary Pressures

Current spot 6.7735

Source: Bloomberg.

USDCNY—We expect China's economy to revive further in the second half with more fiscal stimulus to be rolled out. The Shanghai Composite Index is likely to rebound and prompt more equity inflows. The PBoC has expressed some concerns over the nation's CPI inflation in its Q2 monetary policy report released on August 10. We believe China's central bank will not flood the economy with excessive liquidity and a weaker yuan that makes imports into China more expensive is not in the monetary authority's interest at this stage. USDCNH is expected to trade between 6.7 and 6.8 with downside potential in the weeks ahead.

Qi Gao, Singapore +65.6305.8396

USDTHB

Consolidation as Tensions Ease

Current spot 30.010

Source: Bloomberg.

USDTHB—We see continued capital outflows for the rest of the month, with dividends-induced dollar buying continuing into August. Foreign investors dumped Taiwanese shares early this month amid escalating tensions across the Strait. China's military said on August 10 that it has completed various tasks around Taiwan, which suggests the market impact arising from US House Speaker Nancy Pelosi's visit has faded away. In addition, external factors including the Fed's tightening path will remain important market influences. USDTHB will likely consolidate between 29.8 and 30.0 in the weeks ahead.

USDTHB

Tracks Major Currencies versus USD

Current spot 1.3774

Source: Bloomberg.

USDTHB—The MAS tightened S\$NEER policy in an off-cycle move on July 14, re-centring the mid-point of the S\$NEER policy band up to its prevailing level but keeping the slope and width of the band unchanged. Singapore's economy contracted 0.2% from the previous three months in the second quarter, which prompted the city-state to trim its 2022 growth forecast to a range of 3%–4% from 3%–5% seen before. The SGD will continue running a tight correlation with the EUR, while following a broader market tone. USDTHB could hover around the 1.37 level with odds of sliding towards 1.36.
